

8STRAND BRAIDED ROPE

PP MONOFILAMENT 8STRAND HOLLOW BRAIDED ROPE

It floats and is resistant to rot,oils,gasoline and most chemicals.This cord is great for barriers, tie downs, flagpole halyards, floating lines, and lifelines.

POLYESTER 8 STRAND BRAIDED ROPE

It has superior abrasion resistance and is a good option if you need a rope as strong as nylon but not as elastic. Abrasion resistance gives exceptional durability for running over pulleys and polyester is therefore a popular general-purpose rope in the boating industry and is often used for clotheslines

NYLON 8STRAND BRAIDED ROPE

This high strength resilient nylon rope has the ability to absorb sudden shock; as well as excellent flex and superb resistance to abrasion, chemicals, and marine organisms. It is unaffected by mildew and rot and can be stored when wet. Some of the many uses include marine dock and anchor lines, shipping and industrial work, vehicle tow rope, tie-downs, farm and livestock usage. This rope is easy to splice and is very common for general purpose use and was the first synthetic.

PP MULTIFILAMENT 8STRAND BRAIDED ROPE

This cord is constructed with 8 strands of multifilament polypropylene braided over and under each other in a circular direction. This construction permits a core (inside) fiber to be used for the purpose of adding strength. Polypropylene multifilament has a somewhat velvety appearance and feel.

POLYESTER 16STRAND BRAIDED ROPE

Polyester 16strand braided rope is made from 100% high tenacity polyester and characterized by their resistance to climate conditions as well as excellent UV resistance.This cords has high abrasion resistance,and very high breaking load.In comparison with polyamide cords,polyester cords are softer and more flexible in wet condition.

NYLON 16STRAND BRAIDED ROPE

This braid is generally stronger than solid braid,but not as strong as twisted or double braid.One of the best general purpose ropes that absorbs shock loads due to excellent elasticity. Nylon 16strand braided rope is made from 100% UV -stabilized high tenacity polyamide.Perfect elongation at breaking load.This makes it a good shock absorber.

SOLID BRAIDED ROPE

PP MULTIFILAMENT SOLID BRAIDED ROPE

Solid braid multifilament polypropylene (MFP) has a somewhat velvety appearance and feel. It is constructed of various bundles of fiber interlocked together in a circular braided pattern. The name solid braid refers to the special lock-stitch construction. This is a floating rope and is rot proof and unaffected by water, oil, gasoline and most chemicals. Natural white color is standard, but other colors are available.

NYLON SOLID BRAIDED ROPE

Solid braid ropes are constructed of various bundles of fiber interlocked together in a circular braiding pattern. Nylon is resistant to abrasion, chemicals, and marine organisms, and is among the strongest of rope fibers. Other uses include anchor, mooring, and dock lines. Also used as a general utility rope for farm, camping, home, or industrial use. . Not spliceable.

POLYESTER DOUBLE BRAIDED ROPE

Also known as braid on braid polyester. This rope is actually two braided ropes combined into one rope. A braided core is covered with a braided jacket to produce a strong easy to handle rope. This rope is spliceable and very strong. Polyester double braid provides an excellent combination of high strength, low stretch, excellent weathering and easy handling. Of all the popular fibers polyester has the best weathering characteristics and the best wet abrasion resistance.

NYLON 8STRAND HAWSER ROPE

The rope is higher than the general strength of ordinary cable, elongation, good impact resistance, abrasion resistance, UV resistance and chemical corrosion, use for a long time is not easy to fatigue, long service life. But under wet condition, the strength and elongation are different, intensity fell by 10%. Used in ship assembly, ocean transportation, heavy industry more shipbuilding, defence, military industry and port operations, and many other fields.
